## MAYSU F1 (su)

- Maysu F1 is a early (70-74 days), sugary sweet corn (su) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 220-230 cm and first ear height is 60-70 cm.
- The ears are cylindrical in shape and very attractive.
- Yellow kernel color and very good tip filling.
- Ear length is 20-22 cm and ear diameter is 5.2 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 9-10 mm.
- It has very good kernel alignment and very good husk protection.
- Quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Maize Dwarf Mosaic Virus.

## TANEM F1 (su)

- Tanem F1 is a mid early (72-76 days), sugary sweet corn (su) hybrid.
- Strong plant and resistant to lodging.
- Average plant height is 200-210 cm and first ear height is 60-70 cm.
- The ears are cylindrical in shape.
- Yellow kernel color and good tip filling.
- Ear length is 21-23 cm and ear diameter is 4.9 cm.
- Average number of rows generally 16 in a diameter.
- Average kernel depth is 9-10 mm.
- It has good kernel alignment and good husk protection.
- High yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Moderate Resistant to Maize Dwarf Mosaic Virus.

**\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.**

## ERICA F1 (su)

- Erica F1 is a Mid-Type (74-78 days), sugary sweet corn (su) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 210-220 cm and first ear height is 80-90 cm.
- The ears are slightly tapered in shape.
- Light yellow kernel color.
- Ear length is 20-22 cm and ear diameter is 5,4 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 10-11 mm.
- Good husk coverage.
- High yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.

## SHERBET F1 (su)

- Sherbet F1 is a mid season (75-79 days), sugary sweet corn (su) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 240-250 cm and first ear height is 80-90 cm.
- The ears are slightly tapered in shape and attractive.
- Light yellow kernel color.
- Ear length is 23-25 cm and ear diameter is 5.1 cm.
- Average number of rows generally 16 in a diameter.
- Average kernel depth is 11-12 mm.
- It has good kernel alignment and good husk protection.
- Very big sized and quality ears.
- High yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Maize Dwarf Mosaic Virus.

NEW

**\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.**

## BAHA F1 (sh2)

- Baha F1 is a early (70-74 days), super sweet corn (sh2) hybrid.
- Strong plant and resistant to lodging.
- Average plant height is 210-220 cm and first ear height is 60-70 cm.
- The ears are cylindrical in shape and very attractive.
- Light yellow kernel color and very good tip filling.
- Ear length is 21-23 cm and ear diameter is 5.3 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk protection.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Common Rust

## CARAMELO F1 (sh2)

- Caramelo F1 is a early (71-75 days), super sweet corn (sh2) hybrid.
- Resistant to lodging.
- Average plant height is 160-170 cm and first ear height is 50-60 cm.
- The ears are cylindrical in shape.
- Yellow kernel color and very good tip filling.
- Ear length is 18-20 cm and ear diameter is 4.9 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- It has very good kernel alignment.
- Very quality ears.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.

**\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.**

## VEGA F1 (sh2)

- VegaF1 is a mid season (76-80 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 190-200 cm and first ear height is 60-70 cm.
- The ears are slightly tapered in shape and very attractive.
- Yellow kernel color and very good tip filling.
- Ear length is 20-22 cm and ear diameter is 5.0 cm.
- Average number of rows generally 16 in a diameter.
- Average kernel depth is 10-11 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk coverage.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.

## FRAGMAN F1 (sh2)

- Fragman F1 is a mid season (76-80 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 220-230 cm and first ear height is 75-85 cm.
- The ears are cylindrical in shape and attractive.
- Yellow kernel color and very good tip filling.
- Ear length is 21-23 cm and ear diameter is 5.4 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk protection.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Maize Dwarf Mosaic Virus.

**\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.**

## KHAN F1 (sh2)

- Khan F1 is a mid season (76-80 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 210-220 cm and first ear height is 70-80 cm.
- The ears are cylindrical in shape and very attractive.
- Yellow kernel color and very good tip filling.
- Ear length is 22-24 cm and ear diameter is 5.3 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk protection.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Common Rust and Maize Dwarf Mosaic Virus.
- Moderate Resistant to Northern Corn Leaf Blight.

## MIRZA F1 (sh2)

- Mirza F1 is a mid season (77-81 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 220-230 cm and first ear height is 85-95 cm.
- The ears are slightly tapered in shape and very attractive.
- Light yellow kernel color.
- Ear length is 23-25 cm and ear diameter is 5.4 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- Very big sized and quality ears.
- High yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Common Rust.
- Moderate Resistant to Northern Corn Leaf Blight.

**\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.**

## MACARON F1 (sh2)

- Macaron F1 is a mid season (77-81 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 210-220 cm and first ear height is 70-80 cm.
- The ears are cylindrical in shape and very attractive.
- Yellow kernel color and good tip filling.
- Ear length is 21-23 cm and ear diameter is 5.6 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 11-12 mm.
- Taste is very good.
- It has very good kernel alignment.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Common Rust.
- Moderate Resistant to Northern Corn Leaf Blight.

NEW

## MOUSSE F1 (sh2)

- Mousse F1 is a mid-early (71-75 days), super sweet corn (sh2) hybrid.
- Strong plant and resistant to lodging.
- Average plant height is 180-190 cm and first ear height is 55-65 cm.
- The ears are cylindrical in shape.
- White kernel color and very good tip filling.
- Ear length is 20-22 cm and ear diameter is 5.5 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 12-13 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk protection.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Field holding capability is very good before pre harvest.
- Long shelf life after harvest.
- Suitable for both processing and fresh market.
- Resistant to Common Rust and Maize Dwarf Mosaic Virus.

NEW

\*The performance of the variety may vary according to the climatical conditions, cultivation practices and soil types.

# MAYBICO F1 (sh2)

- Maybico F1 is a mid season (76-80 days), super sweet corn (sh2) hybrid.
- Very strong plant and resistant to lodging.
- Average plant height is 190-200 cm and first ear height is 60-70 cm.
- The ears are slightly tapered in shape and very attractive.
- Yellow-white kernel color and very good tip filling.
- Ear length is 20-22 cm and ear diameter is 4.9 cm.
- Average number of rows 16-18 in a diameter.
- Average kernel depth is 10-11 mm.
- Taste is very good.
- It has very good kernel alignment and very good husk coverage.
- Very quality ears and high yielding potential.
- High adaptation ability for stress conditions.
- Long shelf life after harvest.
- Field holding capability is very good before pre harvest.
- Suitable for both processing and fresh market.
- Resistant to Maize Dwarf Mosaic Virus.
- Moderate Resistant to Northern Corn Leaf Blight.
